Gerflor solutions at CHUSJ – Pediatric Rehabilitation Technopole

Inaugurated in 2019, the Pediatric Rehabilitation Technopole at CHU Sainte-Justine is an innovative space that serves as both a clinical centre and a living laboratory, combining the expertise of the Marie Enfant Rehabilitation Centre (CRME) and the Azrieli Research Centre.

In this highly specialized environment, material selection was driven by strict criteria for durability, safety, and environmental performance. **Mipolam Elegance** flooring was chosen for its proven technical properties in healthcare settings, including wear resistance, easy maintenance, and eco-responsible composition, meeting the demanding standards of the healthcare sector.

The colours **0705 Patisson**, **0343 Pecan**, and **0333 Ananas** helped create a warm, stimulating, and soothing environment for young patients, while supporting a functional atmosphere for healthcare professionals.

With the installation of **Mipolam Elegance** flooring, the Technopole now offers a modern, safe, and welcoming care environment, fully aligned with its mission in pediatric rehabilitation. The thoughtful design and durable materials help enhance the experience for both children and staff, while meeting the highest quality standards in healthcare.
