Gerflor solutions at the Montreal Heart Institute

As part of its major expansion—including new outpatient clinics—the Montreal Heart Institute required flooring and wall solutions that would meet high standards for durability, safety, low maintenance, and visual comfort.

DLW Landscape linoleum, in **0096 Midnight Grey** and **0050 Grey Line** tones, was selected for its natural composition, proven performance in healthcare environments, and positive contribution to indoor air quality.

Areas with high foot traffic and increased safety needs were covered with **Tarasafe 8709 Granite**, a slip-resistant surface designed to offer long-term protection and resilience in demanding conditions.

To bring a warm, welcoming feel to the public zones and care areas, **Decowood** maple-finish wall panels were installed, adding an elegant and calming wood aesthetic. This large-scale project resulted in modern, safe, and long-lasting interior spaces that meet the highest standards of healthcare design. The new installations support patient and staff well-being while reflecting the institute's commitment to excellence and innovation.
